

EBENEZER FRIMPONG

Boston, MA | 413-241-9571

ebenezer.frimpong@tufts.edu | efrimpong.com | linkedin.com/in/efrimpong | github.com/BroCode17

Education

Tufts University

Boston, MA

Master of Science in Computer Science, Graduating in Spring 2027

Technical Skills

Relevant Coursework: Data Analysis with R, Advanced Data Structures, Machine Learning, Mobile App Development, Artificial Intelligence, Database Development, Computer Architecture, Embedded Systems for Robotics, Operating Systems

Developer Tools/Technologies: Distributed Version Control, REST APIs, SpringBoot, gRPC, AWS, Continuous Integration/Continuous Deployment (CI/CD), React, Flutter, Docker, Kubernetes, Apache Kafka, webRTC

Certifications & Training: AWS Cloud Practitioner, Kubernetes, GCP

Experience

Amoarte LLC Art (Contract)

Hartford, CT

Full-Stack Engineer

May 2024 – Jan 2025

- Developed a custom e-commerce solution from the ground up using Node.js, Express.js, TypeScript, and MongoDB to handle product listings, dynamic user interfaces, and secure payment transactions
- Integrated payment gateways, Stripe, and set up robust shopping cart features with real-time inventory updates, ensuring seamless purchasing experiences for customers
- Designed and implemented a microservices architecture to decouple critical services (payment processing, inventory management, user authentication) for independent scaling and rapid feature delivery
- Achieved 99.9% uptime by adopting proactive monitoring and alerting tools with AWS CloudWatch, allowing the team to address potential bottlenecks before they affect users

Pharstcare

Ghana, Accra

Backend Developer

Jan 2023 – Oct 2023

- Built and optimized critical booking and medication ordering functionalities using Python and Django, ensuring a seamless end-to-end experience for users.
- Implemented robust authentication and authorization leveraging Django's built-in authentication system alongside JWT, bolstering security and reducing fraudulent transactions
- Standardized RESTful API endpoints across backend services, ensuring consistency, easier third-party integrations, and a more intuitive developer experience

Virtual Coding Internship | Development & Advanced Engineering Simulation

North America, Virtual

Backend Developer

Jan 2025

- Supported a small dev team overwhelmed by rapid project growth using Java (Spring Boot), cutting bug resolution time by 30%.
- Implemented database migrations with Flyway to minimize downtime and ensure smooth schema updates as the project evolved.
- Developed and maintained end-to-end test suites using Selenium, significantly improving test coverage and catching regressions earlier in the development cycle.
- Set up Jenkins pipelines for automated builds, testing, and deployments, reducing manual overhead and increasing development throughput.
- Refined sprint backlogs by prioritizing high-impact tasks, leading to a more efficient distribution of development efforts and timely feature delivery.

Projects

Emfip LLC Product Website | *Typescript, ReactJs (Nextjs), Resend, Appwrite, Stripe, TrackingMore, Vercel*

- Built a fully functional eCommerce platform using Next.js, leveraging server-side rendering for 7% faster load times and improving SEO by 20%
- Managed backend with Appwrite for secure user authentication, database management, and smooth transaction processing; used Resend API for real-time notifications push through email, boosting engagement by 20%
- Built a real-time product tracking system by leveraging TrackingMore API
- Integrated Stripe to manage payment processing, enabling secure and seamless transactions for over 300 monthly customers

Bank Spend Tracker App | *Nextjs, Appwriter, Plaid, Dwolla, Sentry, Shadcn, Hostinger*

- Proficient in Next.js, building blazing-fast, server-rendered React applications for seamless user experiences
- Streamlined backend development using Appwriter, prioritizing feature-building over infrastructure management
- Integrated Plaid and Dwolla for secure account linking and seamless payment processing in web banking applications
- Implemented Sentry for real-time error monitoring, ensuring the reliability and stability of web applications
- Enhanced user interface with advanced visual effects and interactive elements using Shadcn UI and Tailwind CSS for engaging user experiences

Peer-2-Peer Chatroom | *Python, Socket, Colorama, SQLite, SQLAlchemy ORM*

- Implemented a distributed peer-to-peer chat room for multi-users without a central server using the terminal
- Leverage threading for concurrency to allow a high degree of availability and reliability for both ground messaging and direct messaging while persisting data to the database, while making sure race conditions do not occur
